

NDT NON-DESTRUCTIVE TESTING
and corrosion equipment

Contents

Tektraco NDT

Together with its Principals, specialises in providing a broad spectrum of inspection and test equipment for inspection companies, process plants, manufacturing and service industries.

We are pleased to provide this copy of **Non Destructive Testing & Corrosion Equipment.**

For more details on the equipment presented in this catalogue please contact us.

Tektraco's main offices are in Malta with a branch office in Tripoli.

Our NDT product specialists can be contacted as per contact details found on the back of this catalogue for both Malta & Libya

WE OFFER TO OUR CLIENTS:

- Technical Support and Advice.
- Extensive Product Range.
- Personal Attention to Specific Customer Needs.

Should you not see the product you are looking for or require more detailed information on a particular product please do not hesitate to contact us.

elcometer®

Coating Inspection

From the preparation of the surface to be coated, through climatic condition monitoring to the dry film thickness evaluation, visual assessment and gauge-based testing will ensure adequate process control.

For post coating assessment of adhesion and porosity of the coating there is a full range of adhesion testers and low and high voltage holiday detectors.

Elcometer manufactures and supplies a full range of equipment to ensure that the relevant standards are adhered to.

NDT Equipment

With their ergonomic sealed metal cases, water and dustproof membrane keypads and a wide range of ultrasonic transducer probes, capable of measuring materials at temperatures up to 482°C (900°F), the Elcometer NDT material thickness, precision thickness and flaw detection gauges are the ideal ultrasonic instruments for measuring material thickness, sound velocity and detecting a wide range of flaws in a broad range of industry applications, including the oil & gas, marine, transport, power and civil engineering sectors

World Leaders in Inspection Equipment

For seventy years Elcometer has been a world leader in the design, manufacture and supply of inspection equipment to the coatings, concrete and metal detection industry.

Elcometer have also expanded its product range to include NDT and blast equipment and is well positioned to provide you with the solution to your requirements - whatever and wherever they might be.

Tektraco through its trained sales engineers can provide advice and equipment demonstrations.

Liquid Penetrant Testing

Enhance your penetrant inspections with Magnaflux's full range of penetrant testing products for fluorescent or dye penetrant testing to find cracks, laps, seams, cold shuts, delamination, porosity and other types of defects.

Learn more about why Magnaflux customers trust our liquid penetrant inspection solutions to provide superior results in detecting fine defects and cracks in ferrous and non-ferrous materials.

Magnetic Particle Testing

Magnaflux magnetic particle inspection (MPI) testing equipment is designed to be fast, reliable and high-value. Versatile and durable for industrial environments, Magnaflux wet benches, magnetic yoke and power pack come in a range of outputs, including AC, half-wave DC and full-wave DC. Magnaflux MPI equipment can be sized for specific test parts and to accommodate almost any size part.

Non-Destructive Testing Products & Equipment

As the global leader in non-destructive testing, Magnaflux have been a part of the world's progress helping develop safer parts for cars; making sure that even after hundreds of take-offs and landings a jet liner is safe; testing the steel used in the tallest buildings to ensure the safety of those who live and work in them.

They've helped men land safely on the moon and return to earth. And today, men and women live safely on the International Space Station thanks to Magnaflux.

HITACHI

Handheld XRF Analyzers | X-MET8000 range

The X-MET8000 range of handheld X-ray fluorescence (HHXRF) analysers delivers the performance needed for rapid alloy grade identification and accurate chemistry of a wide variety of materials (solid and powder metals, polymers, wood, solutions, soil, ores, minerals etc).

The X-MET is practical, rugged and easy to use to deliver results you can trust.

Handheld XRF Analyzers

With over 45 years of experience in supplying innovative analysis solutions to companies across the world, Hitachi knows the importance of fast and accurate analysis to its customers. Hitachi High-Tech's range of analysers offers easy to use, proven and comprehensive solutions that can be used to comply with regulations and even enhance productivity, safety and efficiency.

Handheld LIBS Analyzers | Vulcan+ range

Vulcan is one of the fastest metal analysers that is built to last. Just squeeze the trigger and one second later the result appears. As it uses Laser-Induced Breakdown (LIBS) technology, you won't need to worry about X-rays.

Whether your business is scrap sorting or PMI quality control Vulcan delivers accurate and consistent grade ID every time.

Phased Arrays

The Phased Array technique was made possible even in portable, battery-operated instruments more than 10 years ago, powered by more capable electronics and software. Sonatest is proud of its VEO+ and Prisma line that offers the end-user outstanding performance in the field together with the flexibility and capability to step up from using a high-end ultrasonic flaw detector to an instrument with phased array functionality.

Typical applications include Weld Inspection, Crack Detection, Corrosion Mapping, Aerospace and Composite Testing.

Ultrasonic Testing

Sonatest's comprehensive range of portable ultrasonic flaw detectors provides the end user with unrivaled flexibility and performance in the field of Non Destructive Flaw detection.

All instruments are field upgradable, reducing your downtime and increasing your working flexibility, rising to the challenge of your application.

Sonatest are proud to offer some of the most powerful and rugged **UT flaw detectors** on the market with their product development always focused on operator and end user requirements.

Leading Ultrasonic Inspection Equipment

Founded in 1958, Sonatest is the leading manufacturer of ultrasonic inspection equipment. Sonatest is recognised and respected around the world for the quality of their rugged portable products which can be found in every industry and application.

Whether it is conventional ultrasonics or advanced cutting edge phased array with FMC-TFM Sonatest is your partner for Non-Destructive Testing solutions whatever your industry or application.

YXLON

X-ray Inspection of Welds

Assuring weld quality is critical in many applications and industries such as aerospace, power plants, ship building and boiler connections. YXLON offers a wide range of non-destructive testing solutions with portable X-ray systems, stationary X-ray systems as well as X-ray and CT inspection systems.

X-Ray and CT Solutions

YXLON International designs and produces radioscopic and CT inspection systems for a broad variety of industrial applications and fields. Whether in the aviation and aerospace, automotive, or electronics industry, their customers are among the largest manufacturers in the world – major enterprises that place their confidence in their outstanding quality.

Pipe Testing

In contrast to other technologies, difficult areas like pipe ends can also be inspected with confidence using X-ray. Moreover, for certain regions of the weld an inspection involving X-ray is frequently stipulated for safety reasons – for instance in the case of conjoined spiral-weld sections.

Using film, image intensifiers, or digital flat-panel detectors – X-ray systems have been deployed successfully in quality assurance processes during pipe production for both spot-check welding samples and for full inspection.

Advanced Developing Equipment

Colenta specializes in the design and manufacture of a comprehensive range of automatic processing systems for photographic, medical/industrial X-Ray and graphic/printing applications to meet their customers' precise needs.

Colenta manufactures a wide range of processor options and systems for developing NDT films. Their robust design, build quality and low maintenance requirements make them an ideal choice for use in the industrial inspection industry where image quality is so important.

We are also able to compliment the above with the supply of Industrial (NDT) films and chemicals. Contact us for a Quote.

Tektraco, through its Non-Destructive Testing product specialists provides both a consultancy service as well as a wide range of products.
